RISE

Information Architecture (IA) & Product Requirements Document (PRD)

Product: RISE Visionary Development Assessment
Document version: 1.0
Date: 4 November 2026
Product type: Personalised, web-based diagnostic assessment
Assessment structure: 9 pillars · 63 questions · 315 maximum points

---

PART A: PRODUCT OVERVIEW

1. Product vision

RISE is a guided visionary development assessment designed to help individuals understand where they currently stand in their journey from self-discovery to leadership and lasting impact.

The product translates the RISE nine-stage development framework into an interactive assessment experience.

Rather than presenting participants with a conventional questionnaire, RISE takes them through a structured journey. Each stage introduces a specific dimension of visionary development, invites personal reflection through diagnostic questions, and contributes to a comprehensive assessment of their current position.

The experience should feel like a personal journey, not a survey.

2. Product objectives

The product must:

1. Introduce participants to the RISE framework through an engaging visual representation.
2. Personalise the experience using the participant's first name.
3. Guide participants through all nine development pillars in a deliberate sequence.
4. Evaluate each pillar using seven diagnostic questions.
5. Generate individual pillar scores and an overall diagnostic profile.
6. Identify areas of strength, development gaps and priority areas.
7. Present results in a clear, actionable and visually refined format.
8. Encourage participants to take meaningful action based on their results.

3. Target users

Individuals seeking to evaluate their readiness and development across personal vision, purpose, strategy, execution, growth and leadership.

The framework should accommodate different kinds of undertakings, including:

- Personal development and life aspirations.
- Businesses and entrepreneurial ventures.
- Professional and career ambitions.
- Ministries and faith-based assignments.
- Organisational and institutional initiatives.
- Community development and social impact projects.

The assessment must not assume that every participant is pursuing a business or conventional career.

4. Core product principles

Principle	Product implication
Personalisation	Address participants by their first name at meaningful points.
Clarity	Every screen must have one primary purpose.
Progression	Participants move through the nine pillars in a deliberate sequence.
Evidence-based diagnosis	Questions measure demonstrated development, not just aspiration.
Simplicity	Remove visual elements that do not contribute to understanding or interaction.
Continuity	Every pillar should feel like part of the same journey.
Meaningful results	Scores must lead to useful interpretation and recommended action.
Accessibility	The assessment must be comfortable to use across devices and abilities.

PART B: RISE FRAMEWORK ARCHITECTURE

5. The nine pillars

RISE consists of nine interconnected stages grouped into four overarching dimensions.

R — REALISE

Theme: Understanding yourself and defining your direction.

Order	Pillar	Governing question
01	IDENTITY	Who am I?
02	CLARIFY	What matters?
03	CRYSTALLIZE	What future do I envision?

I — IMAGINE

Theme: Giving expression and structure to the envisioned future.

Order	Pillar	Governing question
04	ARTICULATE	Can I communicate it?
05	ARCHITECT	How will I achieve it?

S — START

Theme: Initiating and developing the undertaking.

Order	Pillar	Governing question
06	LAUNCH	Have I initiated it?
07	BUILD	Can I produce consistent results?

E — EXPAND

Theme: Multiplying results and establishing lasting impact.

Order	Pillar	Governing question
08	SCALE	Can I multiply the results?
09	LEAD	Can I develop others and sustain the impact?

Framework rule: The four dimensions organise the nine pillars. They must not be presented as additional assessment pillars or scored independently.

6. Assessment architecture

Component	Specification

Development dimensions	4
Assessment pillars	9
Questions per pillar	7
Total diagnostic questions	63
Minimum question score	1
Maximum question score	5
Maximum pillar score	35
Maximum total score	315

Response scale

Every diagnostic question uses the same five-point scale.

Score	Response
1	Strongly disagree
2	Disagree
3	Neither agree nor disagree
4	Agree
5	Strongly agree

Each question must require one response before the participant can proceed.

PART C: INFORMATION ARCHITECTURE

7. Overall user flow

The assessment follows this sequence:

WELCOME → PERSONALISATION → IDENTITY → CLARIFY → CRYSTALLIZE → ARTICULATE → ARCHITECT → LAUNCH → BUILD → SCALE → LEAD → PROCESSING → RESULTS

Each pillar contains:

1. A pillar introduction.
2. The overarching diagnostic question.
3. Seven diagnostic questions.
4. A transition to the next pillar, where applicable.

The first pillar introduction begins immediately after the name input. Subsequent pillar introductions serve as section transitions.

8. Sitemap and screen hierarchy

None

9. Detailed screen specifications

SCREEN 01 — WELCOME / JOURNEY OVERVIEW

Purpose: Introduce RISE and visually establish the journey the participant is about to undertake.

Primary headline:

Your vision deserves a deliberate journey.

Supporting copy:

Every meaningful undertaking begins with understanding who you are, defining what matters, and envisioning the future you want to create.

RISE takes you through nine stages of visionary development, helping you understand where you stand and what it takes to move forward.

Visual structure:

The nine pillars must appear as a vertical, bottom-to-top progression.

The arrangement is:

Vertical position	Pillar	Colour family
Bottom	Identity	R
	Clarify	R
	Crystallize	R
	Articulate	I
	Architect	I
	Launch	S
	Build	S
	Scale	E
Top	Lead	E

The four colour families must visually distinguish the RISE dimensions.

Each pillar should display:

- Its sequence number.
- Its name.
- Its corresponding development dimension through colour.

Primary CTA: Begin your journey.

Interaction:

- Clicking the CTA navigates to personalisation.
- The journey graphic is informative, not a nine-step navigation menu.
- No assessment questions appear on this screen.

SCREEN 02 — PERSONALISATION

Purpose: Establish a personal connection before beginning the diagnostic experience.

Headline:

Let's begin with you.

Supporting copy:

Before we begin your RISE journey, what should we call you?

Input field:

Label: First name

Placeholder: Enter your first name

Validation:

- Required field.
- First name only.
- Trim leading and trailing whitespace.
- Reject empty submissions.
- Maximum length: 40 characters.
- Do not request surname, email address, phone number or other personal information.
- Do not permit a submission containing only whitespace.

CTA: Begin my RISE journey.

Personalisation rule:

Store the first name and use it in selected introductions, transitions and the results page.

Examples:

- "Let's begin, Somtochukwu."
- "Somtochukwu, your journey starts with understanding who you are."
- "Here is your RISE diagnostic, Somtochukwu."

Do not insert the name into every sentence. Personalisation should feel natural.

SCREENS 03–11 — NINE PILLAR EXPERIENCES

Each pillar follows the same structural template.

A. Pillar introduction

Displays:

- Pillar sequence number.
- Pillar name.
- RISE dimension.
- Short introductory description.
- Overarching diagnostic question.
- Begin assessment CTA.

B. Diagnostic questions

Seven questions are presented individually, preferably one question per screen.

Each question screen contains:

- Current RISE dimension.
- Current pillar name.
- Question position, for example 2 of 7.
- The diagnostic statement.
- Five-point response selector.
- Back and Continue controls.

The one-question-per-screen structure is recommended because it provides adequate reading space, reduces cognitive clutter and supports the guided-story experience.

C. Pillar completion

After question seven:

- Record the pillar score.
- Mark the pillar as completed.
- Transition to the next pillar introduction.

For the ninth pillar, completion leads to processing.

PILLAR INTRODUCTION CONTENT TEMPLATE

Each pillar introduction must follow this format:

1. Stage number.
2. Pillar title.
3. Short explanation of what the pillar represents.
4. What the participant is expected to examine.
5. The overarching question.
6. Continue CTA.

Keep introductory copy concise, ideally 50–90 words.

Do not repeat lengthy explanations across the assessment.

SCREEN 12 — PROCESSING

Purpose: Create a considered transition from assessment completion to the presentation of results.

Headline:

Your journey so far, coming into focus.

Supporting copy:

We're bringing your responses together to build a picture of where you stand across the nine dimensions of RISE.

Interface elements:

- Animated progress bar.
- Percentage indicator from 0–100%.
- Short contextual processing messages.
- Subtle transition animation.

Target experience duration: Approximately 50 seconds.

Suggested processing messages:

Progress phase	Message
0–15%	Bringing your responses together.
16–30%	Examining your nine development dimensions.
31–45%	Identifying areas of strength.
46–60%	Identifying opportunities for growth.
61–75%	Mapping your development profile.
76–90%	Preparing your personalised insights.
91–100%	Your RISE profile is ready.

Important implementation requirement:

The assessment calculations must be performed using the actual submitted responses. The progress indicator must not imply that calculations are taking place when they are not.

If processing finishes before the target duration, the interface may hold the completed preparation state briefly, with an option to proceed when ready. If processing takes longer, the progress indicator must remain accurate and the interface must handle errors gracefully.

SCREEN 13 — RESULTS

Purpose: Present a comprehensive and personalised diagnostic of the participant's current RISE development.

Opening headline:

[First name], here is your RISE profile.

Supporting copy:

Your responses reveal how you currently stand across the nine dimensions of visionary development. Explore your strengths, identify where development is needed and understand the next steps in your journey.

The results page must contain:

1. Overall RISE score.
2. Individual pillar scores.
3. Visual representation of the nine pillars.
4. Individual pillar interpretations.
5. Strongest development areas.
6. Areas requiring attention.
7. Recommended development priorities.
8. Suggested next actions.

The detailed scoring and results requirements are documented in Part E.

PART D: CONTENT ARCHITECTURE

10. Pillar content requirements

Each pillar requires its own content record.

The content model should include:

Field	Description
pillar_id	Unique pillar identifier
pillar_number	Position from 1–9
dimension	R, I, S or E
pillar_name	Name of the pillar
governing_question	Central diagnostic question
introduction_title	Introductory headline
introduction_body	Short explanation
assessment_instruction	Instruction before questions
questions	Seven diagnostic statements
completion_message	Message after the seventh question
colour_token	Associated design colour

11. Pillar introduction content

The following is the initial approved content direction for the nine section introductions. Final wording can be refined during content production.

01. IDENTITY

Headline: First, discover yourself.

Introduction:

Every meaningful vision begins with an understanding of the person who will pursue it. Identity explores your awareness of who you are, what defines you, your values, strengths, gifts and the qualities that shape how you engage with the world.

Overarching question: Who am I?

02. CLARIFY

Headline: Establish what truly matters.

Introduction:

Having an understanding of yourself is only the beginning. Clarify explores whether you have identified what matters most, established your priorities and determined the direction you want your life and undertakings to take.

Overarching question: What matters?

03. CRYSTALLIZE

Headline: Give your future a clear definition.

Introduction:

A meaningful future requires more than general aspirations. Crystallize examines how clearly you have defined the future you intend to create, the outcomes you want to achieve and the difference you hope to make.

Overarching question: What future do I envision?

04. ARTICULATE

Headline: Give your vision a voice.

Introduction:

A vision must be understood before others can meaningfully connect with it. Articulate examines your ability to express your vision clearly, communicate its significance and help others understand the direction you intend to pursue.

Overarching question: Can I communicate it?

05. ARCHITECT

Headline: Design the pathway to your vision.

Introduction:

A clearly expressed vision needs a workable structure. Architect examines how effectively you have translated your aspirations into strategies, plans, resources, responsibilities and practical pathways for execution.

Overarching question: How will I achieve it?

06. LAUNCH

Headline: Take your vision into the real world.

Introduction:

Preparation becomes meaningful when it leads to action. Launch examines whether you have moved beyond planning and initiated the actual undertaking through which your vision will begin to take shape.

Overarching question: Have I initiated it?

07. BUILD

Headline: Develop what you have started.

Introduction:

Starting an undertaking is only the beginning. Build explores your ability to develop the systems, capabilities, relationships and consistent practices required to produce meaningful and sustainable results.

Overarching question: Can I produce consistent results?

08. SCALE

Headline: Multiply your reach and impact.

Introduction:

As an undertaking develops, the opportunity to extend its reach and influence grows. Scale examines your ability to expand capacity, replicate results, reach more people and increase the impact of what you have built.

Overarching question: Can I multiply the results?

09. LEAD

Headline: Build beyond yourself.

Introduction:

Lasting impact requires more than individual achievement. Lead examines your ability to develop others, multiply leadership, establish continuity and create structures that allow your vision to endure beyond your direct involvement.

Overarching question: Can I develop others and sustain the impact?

12. Diagnostic question requirements

Each pillar must contain exactly seven questions.

Questions must:

- Be written as first-person statements.
- Measure one identifiable capability or behaviour at a time.
- Be clear and accessible without specialist terminology.
- Be answerable using the same 1–5 scale.

- Avoid double-barrelled statements.
- Avoid leading language that pressures participants towards positive responses.
- Measure actual development, not simply intention.
- Be relevant across different types of visions and undertakings.

The seven questions must collectively provide a meaningful assessment of their pillar.

Special requirement for LAUNCH:

Questions must distinguish between:

- Having an idea.
- Having a plan.
- Being ready to start.
- Having actually commenced.
- Having delivered something substantive.
- Monitoring initial performance.

A participant must not be considered to have launched simply because they have registered an organisation, announced an initiative or held an opening ceremony.

PART E: SCORING AND DIAGNOSTIC LOGIC

13. Individual question scoring

Each response contributes between 1 and 5 points.

A response must be selected before the participant can continue.

No question should be automatically assigned a score.

14. Pillar scoring

Each pillar contains seven questions.

Formula:

Pillar score = Sum of its seven question scores.

Minimum: 7 points.

Maximum: 35 points.

Example:

Question	Response

Q1	4
Q2	3
Q3	5
Q4	3
Q5	4
Q6	4
Q7	3
Total	**26/35**

The pillar percentage is calculated as:

Pillar percentage = (Pillar score ÷ 35) × 100.

15. Overall RISE scoring

The overall score is the sum of all nine pillar scores.

Minimum possible score: 63.

Maximum possible score: 315.

Formula:

Overall percentage = (Total score ÷ 315) × 100.

The overall score is a summary indicator. It must never replace the individual pillar scores.

16. Pillar interpretation

The application must support configurable score bands.

Initial recommended bands:

Score	Percentage	Interpretation
7–14	20–40%	Critical development area
15–21	42.9–60%	Emerging development
22–28	62.9–80%	Developing capability
29–35	82.9–100%	Strong development

These are proposed interpretation bands, not empirically validated thresholds. They should be reviewed before being presented as definitive measures of development.

The results engine should retain the original numerical score alongside the interpretation.

17. Results interpretation rules

The system must:

1. Calculate each pillar independently.
2. Identify the highest-scoring pillars.
3. Identify the lowest-scoring pillars.
4. Identify the difference between the participant's strongest and weakest areas.
5. Generate development priorities based on the results.
6. Present the overall score without hiding important differences between pillars.

Where multiple pillars share the same score, they must be treated as tied.

The application must not assume that a participant's lowest-scoring pillar is automatically their only priority. Recommendations should consider the meaning and dependencies of the nine stages.

PART F: RESULTS PAGE INFORMATION ARCHITECTURE

18. Results page structure

SECTION 01 — PERSONAL INTRODUCTION

Headline:

[First name], your vision has a starting point. Here is where you stand.

Supporting text summarises the purpose of the diagnostic.

SECTION 02 — OVERALL RISE SCORE

Display:

- Total score out of 315.
- Overall percentage.
- Short interpretation.
- Nine-pillar summary.

Avoid presenting the total score as a definitive measure of someone's worth, potential or future success.

SECTION 03 — YOUR NINE-PILLAR PROFILE

Use a nine-axis radar chart to show the individual pillar percentages.

The chart must:

- Display all nine pillars.
- Use consistent 0–100% scaling.
- Have readable labels.
- Use the appropriate colour family for each dimension where practical.
- Include a numerical score alongside the visualisation.

Do not rely on colour alone to communicate scores.

SECTION 04 — YOUR DEVELOPMENT BREAKDOWN

Display nine individual pillar entries.

Each entry includes:

- Pillar name.
- Pillar score out of 35.
- Percentage.
- Interpretation.
- Expandable diagnostic insight.

Organise the entries into the four RISE dimensions.

SECTION 05 — YOUR STRENGTHS

Identify the participant's strongest areas.

Each insight must explain what the score suggests about their current development.

Avoid generic statements that could apply to everyone.

SECTION 06 — AREAS REQUIRING ATTENTION

Identify the pillars with the lowest scores.

Explain the specific development opportunities represented by those scores.

SECTION 07 — YOUR NEXT DEVELOPMENT PRIORITIES

Present up to three priority areas.

Each priority should include:

- The relevant pillar.
- Why it matters.
- What the participant should focus on.
- A practical next action.

SECTION 08 — CLOSING MESSAGE

Suggested direction:

Your RISE journey does not end with this assessment. It begins with a clearer understanding of where you are and what needs to happen next.

The next step is to turn these insights into deliberate action.

PART G: VISUAL DESIGN SYSTEM

19. Design direction

Design personality: Premium, editorial, immersive, thoughtful, refined and minimal.

The design should communicate depth and intentionality without relying on visual decoration.

Design principles

1. Strong typographic hierarchy.
2. Generous whitespace.
3. Restrained use of colour.
4. Minimal borders and containers.
5. Clear alignment and spacing.
6. Smooth, purposeful transitions.
7. Consistent interaction patterns.
8. High readability on desktop and mobile.

19.1 Colour architecture

Each RISE dimension must have its own colour family.

Dimension	Pillars	Proposed colour
R — Realise	Identity, Clarify, Crystallize	Deep forest green
I — Imagine	Articulate, Architect	Muted blue
S — Start	Launch, Build	Terracotta
E — Expand	Scale, Lead	Deep plum

These are initial design tokens and should be finalised during visual design.

Additional neutral colours:

- Warm ivory for primary backgrounds.
- Charcoal for primary text.

- Muted grey for secondary text.
- Soft neutral grey for dividers and inactive states.

Colour application rule: The current dimension's colour should be the dominant accent on its introduction and question screens. Neutral backgrounds and typography remain consistent across the experience.

19.2 Typography

Recommended direction:

- Editorial serif for major headings.
- Clean sans-serif for body copy and interface labels.
- Tabular numerals for scores and progress indicators.

Typography must remain readable and consistent. Avoid excessive font sizes, multiple decorative typefaces or unnecessary uppercase text.

19.3 Visual exclusions

Do not use:

- Decorative illustrations.
- Random floating shapes.
- Unnecessary gradients.
- Decorative icons.
- Confetti or gamification effects.
- Unnecessary cards.
- Decorative lines without a functional purpose.
- Excessive animations.
- Unrelated stock photographs.
- Unnecessary background textures.

Every visual component must have an identifiable communication or interaction purpose.

20. Interaction design

Question interaction

Use a five-option response selector.

The options should be presented as clearly distinguishable interactive elements.

Interaction states:

- Default.
- Hover.
- Selected.
- Focused.
- Disabled.

The selected response must remain visually apparent.

Navigation

Provide:

- Back.
- Continue.
- Current question number.
- Current pillar.
- Overall assessment progress.

The navigation should be consistent throughout all nine pillars.

Progress indication

Display two levels of progress:

1. Overall assessment progress: 1–63.
2. Current pillar progress: 1–7.

The participant must always have a sense of where they are and how much remains.

Transition behaviour

Transitions between pillars should be more pronounced than transitions between individual questions.

The pillar introduction is a meaningful section break. It should give the participant a moment to understand the next stage before beginning its questions.

PART H: FUNCTIONAL REQUIREMENTS

21. Functional requirements

ID	Requirement	Priority
FR-01	Display the RISE welcome page with nine pillars.	Must
FR-02	Display four visually distinct RISE dimensions.	Must
FR-03	Collect the participant's first name.	Must
FR-04	Validate the name field.	Must
FR-05	Display all nine pillar introductions in order.	Must
FR-06	Display seven questions per pillar.	Must
FR-07	Require a response to every question.	Must

FR-08	Save each selected response.	Must
FR-09	Allow participants to revisit previous questions.	Must
FR-10	Display overall and pillar-level progress.	Must
FR-11	Calculate nine independent pillar scores.	Must
FR-12	Calculate the overall RISE score.	Must
FR-13	Display the processing experience.	Must
FR-14	Generate personalised results.	Must
FR-15	Display a nine-pillar visualisation.	Must
FR-16	Generate strengths and development insights.	Must
FR-17	Display recommended next actions.	Must
FR-18	Preserve assessment responses during navigation and refresh.	Must
FR-19	Support mobile, tablet and desktop layouts.	Must
FR-20	Provide an accessible experience.	Must

22. Navigation and assessment state

The assessment must maintain the following states:

- Not started.
- Name entered.
- Assessment in progress.
- Pillar introduction.
- Question unanswered.
- Question answered.
- Pillar completed.
- Assessment completed.
- Processing.
- Results generated.

Navigation rules

- Participants cannot continue without answering the current question.
- Participants can move backwards.
- Returning to a previous question must show its saved response.
- Changing an answer must update the stored response.
- Completed pillars must retain their responses.
- The assessment must not generate results until all 63 questions have valid responses.
- The final question must lead to processing, not directly to results.

23. Data requirements

The application must maintain the following data:

Participant

- participant_id
- first_name
- assessment_id
- started_at
- completed_at

Pillar

- pillar_id
- pillar_number
- dimension
- pillar_name
- description
- governing_question

Question

- question_id
- pillar_id
- question_number
- question_text
- active_status

Response

- response_id
- participant_id
- question_id
- selected_score
- answered_at

Results

- assessment_id
- total_score
- overall_percentage
- pillar_scores
- pillar_percentages
- pillar_interpretations
- strengths
- development_areas
- recommended_actions

The question bank should be stored separately from the interface so that content can be updated without rebuilding the assessment experience.

PART I: TECHNICAL AND NON-FUNCTIONAL REQUIREMENTS

24. Responsive behaviour

The application must work across:

- Desktop computers.
- Laptops.
- Tablets.
- Mobile phones.

The welcome page's vertical journey must adapt to narrower screens without making pillar names difficult to read.

Question screens must prioritise readability and comfortable interaction.

On mobile:

- Use a single-column layout.
- Keep response options comfortably tappable.
- Prevent horizontal scrolling.
- Keep navigation controls accessible.
- Ensure the progress indicator remains visible.

25. Accessibility

The application must:

- Use semantic headings.
- Support keyboard navigation.
- Provide visible focus states.
- Provide accessible labels for form controls.
- Meet appropriate colour contrast standards.
- Avoid using colour as the only indicator of progress or selection.
- Respect reduced-motion preferences.
- Ensure charts have an equivalent textual representation.

26. Performance

- Initial page should load quickly.
- Question transitions should feel immediate.
- Response selection should not require a server round trip before visual confirmation.
- Responses should be persisted reliably.
- Results should be calculated efficiently.
- Processing animations must not compromise application responsiveness.

27. Privacy and security

The product should collect only the information required for the assessment.

Since the initial assessment requires only a first name:

- Do not request unnecessary personal details.
- Do not expose participant responses through public URLs.
- Do not store assessment data in insecure locations.
- Validate data before calculations.
- Protect access to stored results.
- Establish an appropriate data retention policy.

PART J: ACCEPTANCE CRITERIA

28. Definition of done

The product is considered ready for release when the following conditions are satisfied.

Welcome and personalisation

- Welcome page displays all nine pillars.
- Pillars are arranged vertically from Identity at the bottom to Lead at the top.
- Four RISE dimensions have distinct colours.
- Begin CTA works.
- First name is required.
- Name validation works correctly.

Assessment

- All nine pillar introductions are available.
- Each pillar has seven questions.
- Total questions equal 63.
- All questions use the 1–5 response scale.
- Questions cannot be skipped.
- Previous answers can be revisited and changed.
- Overall progress updates correctly.
- Pillar progress updates correctly.
- The participant can complete the entire assessment.

Processing

- Processing begins only after the final valid response.
- Percentage indicator updates.
- Processing messages appear in sequence.
- Calculations are based on actual responses.
- Errors are handled appropriately.

Results

- Overall score is calculated correctly.

- Nine pillar scores are calculated correctly.
- Radar chart reflects actual scores.
- Results include the participant's first name.
- Strengths are based on actual results.
- Development areas are based on actual results.
- Recommendations relate to the identified gaps.
- Results do not make unsupported claims.

Design

- Colour families are applied consistently.
- Typography is consistent.
- Layout works across screen sizes.
- No unnecessary decorative elements remain.
- Interactions are accessible.
- The experience feels like one continuous journey.

PART K: BUILD SEQUENCE

29. Recommended implementation phases

Phase 1 — Foundation

- Establish design tokens.
- Set up the RISE content model.
- Create the nine-pillar question bank.
- Implement assessment state management.
- Define the scoring engine.

Phase 2 — Entry experience

- Build welcome screen.
- Build vertical RISE journey graphic.
- Build name input screen.
- Implement personalisation.

Phase 3 — Assessment experience

- Build reusable pillar introduction component.
- Build reusable diagnostic question component.
- Implement all nine pillars.
- Implement progress tracking.
- Implement navigation and response persistence.

Phase 4 — Scoring and processing

- Implement score calculations.
- Implement score interpretations.
- Build processing screen.

- Implement results generation.

Phase 5 — Results

- Build overall score presentation.
- Build nine-pillar radar chart.
- Build pillar breakdown.
- Build strengths and development insights.
- Build recommended actions.

Phase 6 — Quality assurance

- Test all 63 questions.
- Test scoring calculations.
- Test navigation and persistence.
- Test responsive layouts.
- Test accessibility.
- Test edge cases and interrupted sessions.

PART L: PRODUCT SUCCESS CRITERIA

30. How success will be measured

The product should track:

Metric	What it measures
Assessment start rate	Participants who begin after viewing the welcome screen.
Name completion rate	Participants who successfully enter their first name.
Assessment completion rate	Participants who complete all 63 questions.
Pillar abandonment rate	Where participants stop during the journey.
Average completion time	Time required to complete the assessment.
Results generation success	Assessments that successfully produce a report.
Results engagement	Participants who explore their diagnostic breakdown.

The primary success metric should be the percentage of participants who complete all 63 questions and successfully receive their results.

FINAL PRODUCT DEFINITION

RISE is a personalised, nine-stage visionary development assessment that guides individuals through a structured examination of their identity, direction, envisioned future, communication, strategy, activation, development, expansion and leadership.

Its interface must make the experience feel deliberate, personal and immersive.

Its assessment must be clear, consistent and diagnostically meaningful.

Its results must give participants more than a score. They must leave with a better understanding of where they stand and what they need to do next.

The guiding experience principle:

Discover yourself. Define your direction. Design your future. Declare your vision. Engineer your strategy. Launch your undertaking. Build your capacity. Scale your impact. Lead your legacy.
